

The Ariane on mountain bike

Molines-en-Queyras

Le haut de l'Aigue Agnel depuis le pont de l'Ariane (Benjamin Musella - PNR Queyras)

Family stroll along the edges of Aigue Agnelle.

A tour along the riversides at the heart of the Aigue Agnelle Valley which lets you reach to the parking area of the Ariane bridge.

Useful information

Practice : MOUNTAIN BIKE

Duration : 1 h 30

Length : 7.6 km

Trek ascent : 156 m

Difficulty : Easy

Type : Aller-retour

Themes : A lookout, a viewpoint, Flora

Trek

Departure : Molines-en-Queyras

Arrival : Molines-en-Queyras

Markings : ▶ VTT

From the top of the parking area of Chanterane, leave the bridge on the left and follow the track on the left bank of the Aigue Agnel. Apart from 2 hairpin bends a bit steep, the entire route is on smooth terrain.

1 - Cross the Peyre Bartino bridge and continue until the Ariane bridge.

2 - From there, turn around and follow the opposite path.

3 - At the top, do not descend on the 2 hairpin bends mentioned above but continue straight on the track.

Follow this false flat track going down until you reach a road.

4 - Turn right and follow the path until the car park.

Aigue Agnelle valley from the Ariane bridge (B)

View towards the Aigue d'Agnelle valley. Snowy on the left side the Crête des Fonzes leads to the Grand Queyras. At the bottom right, Mount Pointe des Sagnes Longues can be seen. In between both, you can make out the Col Agnel and the border with Italy.

Bio indicators: Lichens (C)

A symbiosis between an alga and a fungus, lichens are both very strong and very fragile. Indeed, they are able to withstand a strong drought and extremely different temperatures (-70 °C / -94 °F to 70 °C / 158 °F). However, they are very sensitive to air pollution, including sulphur dioxide. They are thus good indicators of air quality. Here, you can contemplate two species of fruticose lichens. One has a vivid yellow colour which is due to the presence of a particularly toxic acid: vulpinic acid.

Calendula officinalis (D)

Better known under the name of Marigold, this plant is used in herbal medicine or cultivated in gardens to scare away insects. Its seeds can withstand very low temperatures (-25 °C / -13 °F) and are spread by the wind. These characteristics explain its presence here because it is not its natural distribution area. The Marigold has calming and healing properties. It is used for skin problems, various inflammations, gastric problems and liver diseases.
