

The plague wall

Cabrières-d'Avignon

Le mur de la Peste (©Eric Garnier - PNR Luberon)

A world of stones, dry stone walls, nature and silence but not only!

"The heat is tough, feet tingle on the stones, but I love this land where the stone is everywhere; in landscapes, in its history, in its vocabulary I also like the smell of pine trees uprooted by the mistral and hearing the evening breeze blowing on the peaks of cliffs. One might think that the sea is right there! However, these places have not always been a paradise ". says Eléa de Robert, a 2nd year Master intern at the Luberon RNP.

Useful information

Practice : WALKING

Duration : 2 h

Length : 7.5 km

Trek ascent : 263 m

Difficulty : Easy

Type : Boucle

Themes : Heritage and history

Trek

Departure : Car park below the town hall, Cabrières d'Avignon

Arrival : Cabrières d'Avignon

Markings :  GR®  GRP®  PR

From the car park, reach the Avenue Jean Giono and take a left. Continue to the right on Grand Rue to the center of the village ("Mur de la peste" arrow). Pass the church. In front of the fountain, go left onto the Rue du Château. Pass the wash house, go straight and take the Chemin de la Pourtalette. At the calvary, go straight and 50m further, continue across on the Chemin de Muscadelle ("Mur de la peste" arrow). After the paved path, climb straight onto the stony path and the mountain pass (Croix de Lagnes), continue on the path opposite to the Plague wall.

1- Take a sharp right and go along the Plague wall. Upstream, the path deviates somewhat from the wall and goes along it again. Reach under the pines, the crossroads "La Peithe".

2- Turn left, pass through the forest track and at the signpost "Citerne", take the road to the left (GR®). At the two successive crossing trails, continue straight and head to the valley. Pass one well rocky section and head down again. At the crossroads "Vallon des Esperacons", leave the GR® and climb the left trail (PR).

3 - At the intersection "Esperacons", continue on the balcony trail to the right (PR). Pass an edge (panoramic viewpoint at 20m to the right) and continue the path to the left.

4- At the crossroads "Le Soldat" take a left and 50m further, continue to the right. At the Y (point 285), follow the right track. Pass a hairpin bend and descend. At the entrance of a right turn (large pine tree), rush on a path to the left. Below after a right turn, stay on the right track. At the track, reach the D100 to the left. Take the road to the left for 150m and reach the parking area.

5- Take the track that starts to the left along the parking lot. 300m further, leave the trail leading to a house and embark on the path in front. Go down and reach point 1 at the Plague Wall. From there, return to Cabrières d'Avignon through the same route used to go.

On your path...

Cabrières-d'Avignon (A)

On the side of the Monts de Vaucluse, this village with a rich historical past has a name that can refer to the old "quarries" that were found in the area. Another version would like Cabrières to be translated as "goat country", the origin coming from the word "Cabro", goat in Provençal. The "d'Avignon", (official version) comes from its belonging to the Comtat Venaissin and was used to differentiate this Cabrières of Cabrières-d'Aigues, also in the department of Vaucluse.

Night Sky Protection (B)

The town of Cabrières d'Avignon is very involved in the actions of energy management. With the support of the Park, it has optimized all of its consumption items. Public lighting has been changed and has made the common practice of a night off all street lights in the middle of the night. Low energy bulbs do not dazzle as much. Energy consumption has been cut in half! And these measures are actively involved in protecting the night sky.

The low-fountain and the washhouse (C)

Dating back to the 19th century, the low-fountain consists of a lock wall (basin) in a semi-octagonal shape formed with large stones hooked together. Note also the large size of the iron bucket holders. Originally, its overflow fed the washhouse which was located a little lower, which is not the case today. The latter is composed of three basins which were used for washing and rinsing. The wooden beam, in turn, was used to spin-dry the clothes.

Castle of Cabrières d'Avignon (D)

The castle of Cabrières Avignon dates from the eleventh or twelfth century. It is a historical place that served as shelter to Vaudois in spring 1545. During the massacre of the Vaudois, the village is razed; the castle was rebuilt in the late sixteenth century. Ranked as a historical monument, this private castle can be visited only during Heritage Days in September.

The plague wall (E)

This wall of about twenty kilometers went from Monieux to Cabrières passing through Methamis, Venasque, Le Beaucet, Saumane and Lagnes. It was built in just a few months, between March and July 1721 by 500 men, masons and laborers. This sanitary barrier had watchtowers, guard-houses, food and fodder supply storehouses. The wall was guarded by a thousand men who had orders to shoot anyone crossing the wall without permission.

The arrival of the plague! (F)

Two months after the docking of the ship Le Grand Saint-Antoine on May 25, 1720 in Marseille, the plague spread, reached the working-class areas of the city to then spread along the coast upto Toulon; after passing the Durance, it reached Pertuis, Cucuron and Apt. For a better protection of the Venaissin County and the State of Avignon, two papal lands, it was decided to build a wall of dry stone of about 2m high.

Changing Sides! (G)

In August 1721, the plague was declared in Avignon, whereas apt got rid of it! The roles were now reversed: French troops are positioned on the wall to protect the Provence. After making more than 7000 victims in the Venaissin County and at least 83,000 in Provence, the disease became extinct in January 1723 and the wall was forgotten. Today registered under the Historic Monuments, it is the subject to regular restoration campaigns.

Stone shelters (H)

There are constructions on either side of the wall. Regularly spaced, guardhouses (semicircular huts) were used to house a sentry in the event of inclement weather and were certainly covered with a roof in branches or tiles. The huts attached to the wall, housed the units but also the equipment and provisions. On the most isolated places of the plateau, the pens served as warehouses for food and fodder for mules transporting water and provisions.

After the plague ... (I)

From 1723, the wall no longer had any sanitary utility and the stones were re-used for other constructions. Since 1986, a campaign of restoration and valorization is in place through the association "Pierre sèche en Vaucluse". You can see the wall here, between Cabrières-d'Avignon and Lagnes, as well as in Murs. Today, nearly 6 kilometers have been restored.

Long live the cedar! (J)

In August 1989, the fire started from the bottom of the Oule valley located a little further north, and ravaged 338ha of forest in Cabrières d'Avignon and Fontaine-de-Vaucluse. Here, some islands of cedars from the Algerian Atlas still bear the scars of that fire, but most have resisted. Others were replanted in 1991.

Karstic trail (K)

A limestone formation with an original topography is characterized as karstic, characterized by underground drainage which causes corrosion of the rock. Here we see a lapiaz. This surface geological formation is created by the runoff of rainwater that dissolves the rock or by cryoclasty (freezing and thawing of the water infiltrated in the rock). It is what forms this impressive rocky entablature traversed by faults and fissures.

Silver conifers (L)

Conifers of majestic and imposing appearance, the cedars are distinguished by their bluish or silver color. These large cedars were planted in 1860 to the north of the village and extend over five hectares on the slopes of the Monts de Vaucluse. It is an important forest species, its fine, light and aromatic wood is used in woodwork or as a framework.

The European (wild) rabbit (M)

The wild rabbit lives in colonies in burrows which forms what is called a warren. A grass eater, it can eat away the bark of young trees in winter when grass is scarce. The wild rabbit is able to reproduce 4 to 6 times per year with 3 to 8 kittens per litter, this explains its reputation as "horny bunny". Its population has declined sharply in the Luberon from diseases such as myxomatosis or VHD (Viral Hemorrhagic Disease).

Attribution : ©DR

These other walls ... (N)

Naturally arid and occupied by the forest, the hills had to be cultivated to meet a large rural population increase. Terracing to limit erosion and to cultivate the foothills, retaining walls were necessary: the restanque walls, a Provençal term for retaining. "Tanquer" in Provençal means "hold firmly, block", these walls can retain dirt while allowing water to pass. An ingenious stack of limestones built without a mortar!
