

The Routo of Baume Brignolle

Saint-Rémy-de-Provence

Troupeau ovin en vue de la Caume (Lionel Roux)

Take a stroll among the peaks and valleys of Baume Brignolle to discover the richness of the Alpilles!

On the heights of St-Rémy-de-Provence, between mountain ridges and valleys, the hike follows steep passages in the northern mountain chains of the Alpilles and open plateaus to the South, for complete immersion in the landscapes of the Alpilles. This long walk on the path of Baume Brignolle, is an invitation to discover the nature and heritage of the area, through the actions of the park to protect this biodiversity and the land which it owns.

Useful information

Practice : WALKING

Duration : 6 h

Length : 19.5 km

Trek ascent : 532 m

Difficulty : Difficult

Type : Boucle

Themes : Farming and pastoralism,
Geology, Heritage and history

Trek

Departure : The bridge said to be Roman, in Eygalières

Arrival : The bridge said to be Roman, in Eygalières

Markings :  GR®  PR

From the car park of the bridge said to be Roman, cross the ford and start hiking through the wooded path. Continue until you leave the shaded area to reach the fruit cultivations.

1 - Head towards the Chateau Romanin on the left after crossing the vineyards and tree crops to either side of the path. Before reaching to the castle, follow the trail marked in red and white (GR®) which plunges to the left and climb to the Col de la Vallongue. Then turn right and continue along the narrow stony path, first at the foot of the ridges and then all along them.

2 - Enter the zone for biotope protection, covered by prefectural decree. Turn left at the crossroads after taking a few steps in the middle of the surrounding vegetation, and follow the trail to leave the pylon on the right. Continue straight. Across the telecommunication antenna, follow the road that continues downwards to leave the plateau of Caume.

3 - Below the plateau, continue straight at the first intersection before turning left at the next intersection to take the Chemin de Baume Brignolle. After 800m, at the crossroads where 6 paths meet, follow the second path to the left, it is the DFCI AL 115 track. Continue on Chemin de Baume Brignolle until you reach on the D24.

4 - Continue straight along the main road. Preferably, take the small path which is on the left. Continue until the crossroads between the D24 and the D25.

5 - At the intersection at the bridge, follow the D24 towards Eygalières until the bridge said Roman bridge, end point of the hike.

All useful information

Advices

Beginners should refrain. This hike is long and follows steep passages.

Unmarked section of the Chemin de Baume Brignolle (between reference points 3 and 4).

Bivouacs and dogs (even on leash) are prohibited in the Prefectural decree area of the biotope protection.

Altimetric profile

Min elevation 116 m
Max elevation 390 m

Access

The starting point is on the D24, between Eygalières and the junction with the D25, at the car park of the bridge said to be Roman.

Advised parking

Car park of the bridge said to be Roman, in Eygalières

On your path...

Pont dit Romain (A)

The bridge called Pont dit Romain does not date from Antiquity but from the Middle Ages. Its name still remains a mystery today. It was built on the chemin des Poissonniers, which was already used during Antiquity, to replace the crossing point that passes through the *gaudre* of Romanin (a *gaudre* is a temporary water body). This ancient route started from the chapel Notre-Dame de Piargues (or Notre-Dame-de-Romanin) and joined Mouriès crossing the Vallongue.

The castle of Romanin (B)

On your right is the castle of Romanin. At the foot of the ridges, this fortified place now in ruins was built to protect the north side of the Alpilles. It was controlled by the Lords who were themselves under the governance of the Counts of Provence. Its construction date has not yet been researched, but the most ancient texts had already mentioned it in the 12th century.

The Alpilles ridges (C)

The Alpilles have been constantly evolving for over the past 135 million years, to become the one you're standing on. These limestone ridges, bordered by the GR6, date back to the Cretaceous and appeared there about 70 million years BC. They dominate the Petite Crau. From here you can see the Montagnette massif to the northeast, and further away, Mont Ventoux, which rises to an altitude of 1912m. In the south, you have a wide view of the Alpilles.

Mérinos d'Arles sheep breed (D)

The Mérinos d'Arles, cross-breed between Mérinos d'Espagne and the breed of Arles, is the emblem of the great transhumance. Its herd-like instinct and its ability to adapt to different environments have favoured its expansion throughout the region. Known for the quality of its meat and its wool, it helps maintain the natural sites and landscapes from the delta of the Camargue, the Crau steppe or the Alpilles massifs until the peaks and alpine lakes.

Protecting the biodiversity (E)

A Prefectural Decree for biotope protection is a defined geographical area that preserves the ideal conditions for the development of certain plant and animal species. These biotopes are natural areas which are environments with a very fragile balance. On the Plateau de la Caume, this decree primarily concerns the Bonelli's eagle. Other protection areas, such as Nature Reserves exist to protect this rich biodiversity.

The Valrugues valley (F)

This is the perfect place to observe raptors and other birds (Bonelli's eagle, Egyptian vulture, Alpine swift), which have made it hunting ground. You can also see the Rocher des Deux Trous, to the west of the valley. This geomorphological phenomenon is the result of wind erosion, which dug into the limestone as to form two holes, hence the name. To the east, you will notice the steepness of the cliffs, true natural walls.

Plateau de la Caume (G)

Plateau de la Caume is "must see" site of the Alpilles. With a peak at 378m above sea level, this limestone feature is a crossing point of the GR6, the perfect route to discover the ridges of the Alpilles. This area hosts a rich ornithological biodiversity with the Bonelli's eagle, the Egyptian vulture, but also the Western jackdaw. Combined with human activity (passing of hikers, telecommunication towers), the site illustrates the Alpilles, which combines nature and civilization.

Jas du Pézou (H)

Here are the ruins of the Jas du Pézou. The word "Jas" comes from the Provençal language and means "house." This is a large building in dry stone, which allowed the housing of flocks and herds. It was rather built away from farms or homes. This allowed to shelter the animals when they were brought to graze on the way to Baume Brignolle, and must have had a link with the Pierredon castle located a little further south.

Attribution : Jason Gaydier - PNR Alpilles

The Vallongue farmhouse (I)

Located at the southeast end of the Alpilles ridges, the Vallongue domain has 38 hectares on which is produced wines and olive oils. These vineyards were the first to turn to organic farming, as of 1985! Reds, whites and rosés benefitted from Les Baux de Provence Appellation d'Origine Protégée (AOP) label and Alpilles of Vallongue Indicateur Géographique Protégé (IGP) label, proof a real know-how.
